The disclosure is objected to because of the following informalities: figs. 26 & 29 should be labeled as --prior art--. Claims 1 & 13 refer to adjusting the delay generated in (claim 1, line 23) or occurring in (claim 13, line 20) the "distorting device" when it appears the delay is adjusted in the --distortion compensation device-- as all of the delay portions of the figures occur in the distortion compensation circuitry.

Appropriate correction is required.

This application is in condition for allowance except for the following formal matters:

As above.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Belcher et al. disclose a predistortion unit for an amplifier (fig. 1) that uses the input and feedback signals to develop coefficients for the predistortion unit, and w.r.t. claim 13 includes a bandpass filter in the feedback loop (fig. 6). However, Belcher et al. lack the noise power detection portion of the claim. Fudaba et al. disclose in fig. 4 using a FFT processor 231 to select filter coefficients but lacks the delay time determination of claims 1 and 7.
